IMPLEMENTATION BARRIERS / REALLOCATION CAPACITY (MU)

implementation_barriers

STATIC TEXT

This module measures whether the household can realistically protect evening time for the focal girl without simply shifting her chores later into the night. The goal is to understand whether the household has a feasible way to reorganize work.

STATIC TEXT

Concrete evening scenario:

Now think about a normal school evening. Suppose the focal girl comes home from school and the household wants to protect time for her before she does any household work: first time to rest, bathe, eat, or take care of herself, and then time to study without interruption. Altogether, suppose she is not available for household chores for about two and a half hours after returning from school.

Would this be feasible in your household on most school evenings?	SINGLE-SELECT scenario 01 ○ Yes, feasible without major difficulty 02 ○ Feasible, but difficult 03 ○ Not feasible 04 ○ It depends on the day 98 ○ Don't know
During those two and a half hours, would there usually be household work that the focal girl currently does or is expected to help with?	SINGLE-SELECT hh_work_during_study_time 01 ○ Yes 00 ○ No 98 ○ Don't Know

What work would be affected during th at time?

MULTI-SELECT main_task

PERCEIVED EDUCATIONAL COST OF CHORES, INTERRUPTIONS, AND FATIGUE(Q)

educ_cost_chore

STATIC TEXT

This module measures the parent's perceived educational cost of girls' evening chores. It captures four dimensions: reduced study time, interruptions during study, lack of rest before studying, and fatigue or late sleep.

Now I will describe examples of school evenings for a girl around the focal girl's age. We are not asking what your household should do. We only want to know whether you think these differences would affect the girl's ability to study, prepare for class, or pay attention in school.

STATIC TEXT

In many households, when a girl comes home from school in the evening, she first helps with household work, such as fetching water, cooking, washing dishes, sweeping, cleaning the kitchen, or helping younger children. After that, she eats and studies if there is time.
Now imagine that, on most school evenings, this girl had fewer chores and therefore had more time to review her lessons before going to bed.

Do you think this would improve how pr epared she is for class the next day?

SINGLE-SELECT fg_prep_improve_belief

- 01 ○ No, it would not improve her preparation
- 02 ○ Yes, it would improve her preparation a little
- 03 ○ Yes, it would improve her preparation moderately
- 04 ○ Yes, it would improve her preparation a lot
- 05 ○ It could make things worse
- 99 ○ Don't know

STATIC TEXT

Now imagine that the girl studies for one hour in the evening. In one case, she studies for the full hour without being interrupted.
In another case, she still studies for one hour total, but she is called away once or twice to do household tasks and then comes back to study.

Do you think avoiding these interruptions would improve how much she learns during that study time?

SINGLE-SELECT fg_learn_improve_belief

01 ○ No, it would not improve how much she learns
02 ○ Yes, it would improve it a little
03 ○ Yes, it would improve it moderately
04 ○ Yes, it would improve it a lot
05 ○ It could make things worse
99 ○ Don’t know

STATIC TEXT

Now imagine two evenings.
In the first evening, the girl comes home from school and immediately starts household work before studying. In the second evening, she first has some time to rest, bathe, eat, or take care of herself, and then studies.
Assume she studies for the same amount of time in both evenings.

Do you think having time to rest before studying would improve how well she studies that evening?

SINGLE-SELECT fg_rest_improve_belief

01 ○ No, it would not improve how well she studies
02 ○ Yes, it would improve it a little
03 ○ Yes, it would improve it moderately
04 ○ Yes, it would improve it a lot
05 ○ It could make things worse
99 ○ Don't know

STATIC TEXT

Now imagine that, because of evening activities, a girl often finishes late and sleeps less on school nights.

If her evening routine changed so that s he could finish earlier and sleep more, do you think this would improve her att ention in class the next day?

SINGLE-SELECT fg_sleep_attention_belief

01 ○ No, it would not imp rove her attention

02 ○ Yes, it would improv e her attention a little

03 ○ Yes, it would improv e her attention modera tely

04 ○ Yes, it would improv e her attention a lot

05 ○ It could make things worse

99 ○ Don't know

INHERITED CHORE ARRANGEMENTS AND RECONSIDERATION

intergen_transm

STATIC TEXT

This module measures whether the focal girl's current chore arrangement appears to reproduce inherited household practices or whether the household has actively reconsidered and adapted those practices to schooling.

Thinking about the household where yo u grew up, would you say girls were usu ally expected to do more routine house hold work than boys?	SINGLE-SELECT chore_gender_origin 01 ○ Yes, girls did much more 02 ○ Yes, girls did somew hat more 03 ○ Girls and boys did a bout the same 04 ○ Boys did somewhat more 05 ○ Boys did much more 06 ○ There were not both girls and boys in that h ousehold 07 ○ Cannot remember
Compared with what you saw growing up, is the way chores are organized for the focal girl today?	SINGLE-SELECT chore_similarity_origin 01 ○ Very similar 02 ○ Somewhat similar 03 ○ Somewhat different 04 ○ Very different 05 ○ Cannot compare
Before this survey, had you ever serious ly thought about whether the focal girl's chores on school days should be chang ed because of school, homework, rest, or fatigue?	SINGLE-SELECT chore_reflection_school 01 ○ Yes, often 02 ○ Yes, sometimes 03 ○ Rarely 04 ○ Never

Which statement best describes how th e current chore arrangement for the foc al girl came about?

SINGLE-SELECT chore_arrangem_origin

01 ○ We mostly kept the way things were done when we were growing up
02 ○ We intentionally cha nged things because sc hool now requires mor e time
03 ○ We intentionally cha nged things because gi rls' study time or rest b ecame more important
04 ○ It is mainly shaped b y practical needs in the household
05 ○ It mostly happened over time without muc h discussion
06 ○ It is mainly shaped b y the preference of ano ther adult in the house hold
98 ○ Other

COMMUNITY NORMS AROUND BOYS' DOMESTIC WORK

com_norms

STATIC TEXT

This short module measures whether community norms or social pressure make it difficult for households to reassign some domestic tasks from girls to boys during the school year.

In this community, if a school-age boy r egularly helped with household chores such as sweeping, washing dishes, fetc hing water, or caring for younger childr en, what would most people think?	SINGLE-SELECT hh_help_boy_view 01 ○ They would think it i s good 02 ○ They would think it i s acceptable / normal 03 ○ They would not care 04 ○ Some people would disapprove 05 ○ Many people would disapprove 99 ○ Don't know
If parents asked a son to do more hous ehold chores so that his sister could hav e more time to study, what would most people in this community think?	SINGLE-SELECT son_chore_sis_study_time 01 ○ They would think it i s good 02 ○ They would think it i s acceptable / normal 03 ○ They would not care 04 ○ Some people would disapprove 05 ○ Many people would disapprove 99 ○ Don't know
Are there any household tasks that boy s around this age should not do becaus e people in the community would critici ze or disapprove?	SINGLE-SELECT boys_house_task_criticism 01 ○ Yes 00 ○ No 99 ○ Don't know

If yes, which tasks?

I Enumerator: Record all that apply.
E `boys_house_task_criticism == 1`

MULTI-SELECT `disappr_tasks_list`

01 ☐ Fetching water
02 ☐ Collecting firewood/ fuel
03 ☐ Cooking/preparing f ood
04 ☐ Washing dishes
05 ☐ Sweeping/cleaning
06 ☐ Childcare
07 ☐ Laundry
08 ☐ Going to the market / outside errands
09 ☐ Farm/business help
98 ☐ Other

Other, Specify

E `disappr_tasks_list.Contains(98)`
V1 `self == self.ToUpper()`
M1 Please enter in uppercase.
